Introduction to speciality

Discipline cycle	Basic disciplines
Course	1
Credits count	3
Knowledge control form	Examination

Short description of discipline

This discipline is aimed at students' awareness of the importance of the profession of a psychologist in modern society, professional and ethical standards of professional activity and the main stages of the formation of psychology as a science and practice. They will have ideas about psychological science and practice, a holistic vision of professional activity. Forms general competencies about psychological science and develops a steady interest in the professional activity of a psychologist.

Purpose of studying of the discipline

equip students with knowledge of the theoretical foundations of modern psychology; to form professionally significant qualities of future psychologists in the process of teaching psychology.

Learning Outcomes

ON 6 Understand the high social significance of the profession, responsibly and efficiently perform professional tasks, comply with the principles of professional ethics, organize joint conflict-free activities and interpersonal interaction of subjects of the psychological environment.

ON 12 Analyze and evaluate the psychological state of a person or group, distinguish between a range of cognitive processes, as well as all possible behavioral manifestations of personality, apply modern psychotechnics in the practice of a psychologist.

Learning outcomes by discipline

- understand the psychological and pedagogical conditions and mechanisms that determine the professional effectiveness of a psychologist;*
- explain the psychological characteristics of a person's personality in professional activity*
- operate with the basic categories and concepts of psychology.*

Prerequisites

School course

Postrequisites

Basic and profile disciplines of the EP Psychology history

Psychology of cognitive processes and personality

Discipline cycle	Basic disciplines
Course	1
Credits count	3
Knowledge control form	Examination

Short description of discipline

The course is aimed at mastering the cognitive sphere and personal development of a person, approaches to understanding the mental development of a person in ontogenesis, in the development of scientific knowledge on the most important problems of the psychology of cognition and personality in the aspect of cultural and historical development. They will get acquainted with the basic laws that characterize mental processes. They will acquire knowledge and skills to determine the level of development of human cognitive processes.

Purpose of studying of the discipline

mastering fundamental knowledge concerning the psychology of human cognitive processes: sensations, perception, attention, memory, imagination, thinking and speech.

Learning Outcomes

ON 6 Understand the high social significance of the profession, responsibly and efficiently perform professional tasks, comply with the principles of professional ethics, organize joint conflict-free activities and interpersonal interaction of subjects of the psychological environment.

ON 12 Analyze and evaluate the psychological state of a person or group, distinguish between a range of cognitive processes, as well as all possible behavioral manifestations of personality, apply modern psychotechnics in the practice of a psychologist.

Learning outcomes by discipline

- 1. Substantiates the features of the cognitive sphere and personal development of a person*
- 2. Skills of studying the mechanisms of cognition and personality development*
- 3. Understanding of human mental development in ontogenesis*

Prerequisites

School course

Basic and profile disciplines of the EP Psychology history

The development of the human psyche

Discipline cycle	Basic disciplines
Course	1
Credits count	3
Knowledge control form	Examination

Short description of discipline

This discipline is aimed at mastering the multilevel and multidirectional processes of the development of the psyche, their phylogeny and ontogenesis. Formation of students' ideas about the diversity of approaches to understanding human mental development. Mastering the theoretical foundations, patterns and mechanisms of the development of the psyche. The skills of studying the specific laws of mental development, the dynamics of mental activity processes and the basic laws of the development of the human psyche are acquired.

Purpose of studying of the discipline

The purpose of studying the discipline: the formation of students` ideas about the variety of approaches to understanding the mental development of a person in ontogenesis, in the development of correct, scientific knowledge on the most important problems of developmental psychology in the aspect of cultural development. Arming students with theoretical and practical knowledge, which will contribute to strengthening their professional psychological and pedagogical training, in- depth study of one of the sections of psychological knowledge: the structure and methodological foundations of developmental psychology, psychological characteristics of a person`s personality in ontogenesis.

Learning Outcomes

ON 6 Understand the high social significance of the profession, responsibly and efficiently perform professional tasks, comply with the principles of professional ethics, organize joint conflict-free activities and interpersonal interaction of subjects of the psychological environment.

ON 12 Analyze and evaluate the psychological state of a person or group, distinguish between a range of cognitive processes, as well as all possible behavioral manifestations of personality, apply modern psychotechnics in the practice of a psychologist.

Learning outcomes by discipline

- mastering multi-level and multidirectional processes of mental development
- demonstrates the skills of studying specific patterns of mental development
- analyzes the dynamics of mental activity processes

Prerequisites

School course

Postrequisites

Basic and profile disciplines of the EP Psychology history

Cognitive psychology

Discipline cycle	Basic disciplines
Course	1
Credits count	3
Knowledge control form	Examination

Short description of discipline

The course is aimed at studying the spectrum of mental processes, including how people think, use language, perceive information and the environment. They will get acquainted with the main directions of research in cognitive psychology and the mechanisms of cognitive activity. To study the thought processes, processing of human information, the role of language development and ways to solve problems. They will demonstrate the possibilities of predicting changes and dynamics of the development and functioning of cognitive processes.

Purpose of studying of the discipline

the formation of students` general ideas about the psychological and psychophysiological mechanisms of cognitive activity - perception, analysis, memorization, transmission and use of information by a person, familiarization of students with the basics of theoretical and empirical knowledge in the field of cognitive psychology

Learning Outcomes

ON 12 Analyze and evaluate the psychological state of a person or group, distinguish between a range of cognitive processes, as well as all possible behavioral manifestations of personality, apply modern psychotechnics in the practice of a psychologist.

Learning outcomes by discipline

- Possess basic knowledge in the field of cognitive psychology
- To know the basic concepts, features of methodology, methods of cognitive psychology, the history of cognitive psychology development.
- be able to form ideas about the basic theories and principles of the functioning of cognitive processes

Prerequisites

General Psychology

Postrequisites

Workshop on psychology Medical psychology Fundamentals of psychocorrection and counseling

Cognitive-behavioral psychology

Discipline cycle	Basic disciplines
Course	1
Credits count	3
Knowledge control form	Examination

Short description of discipline

The course comprehensively explores a wide range of mental processes, including the peculiarities of perception and understanding of information, will consider the cognitive processes of human consciousness and methods of their research. The course is aimed at mastering knowledge about the basic theoretical concepts and modern trends of cognitive behavioral psychology, the principles of their application. Students will be able to use cognitive behavioral indicators as criteria for personal development in practice.

Purpose of studying of the discipline

to provide an opportunity to gain theoretical and practical knowledge about the basic principles, methods and techniques of cognitive-behavioral diagnostics and counseling and to form the skills of their application.

Learning Outcomes

ON 12 Analyze and evaluate the psychological state of a person or group, distinguish between a range of cognitive processes, as well as all possible behavioral manifestations of personality, apply modern psychotechnics in the practice of a psychologist.

Learning outcomes by discipline

- Know the methodology, theory and practice of cognitive behavioral psychology

- Be able to conduct functional behavior analysis
- Master the main directions of cognitive behavioral psychology

Prerequisites

General Psychology

Postrequisites

Psychodiagnosics and correction of deviant Fundamentals of psychocorrection and counseling

Psychology of Personality

Discipline cycle	Basic disciplines
Course	1
Credits count	3
Knowledge control form	Examination

Short description of discipline

The discipline is aimed at mastering the problems of personality development and formation from the positions of various theoretical directions and schools. Ideas about the main factors of personality development, personality structure, properties and characteristics are formed based on the study of personality theories in modern psychology. Students will acquire the skills and abilities of organizing and conducting psychological research of personality and its interpretation.

Purpose of studying of the discipline

The purpose of studying the discipline: to systematically state the basic ideas about mental processes and states of a person, their specificity, structure, phenomenology, conditions of functioning and development of the personality and to present a system of categories and concepts with the help of which personality psychology seeks to express all the variety of manifestations of the inner world of a person.

Learning Outcomes

ON 12 Analyze and evaluate the psychological state of a person or group, distinguish between a range of cognitive processes, as well as all possible behavioral manifestations of personality, apply modern psychotechnics in the practice of a psychologist.

Learning outcomes by discipline

-To know:

the main theoretical directions in psychology and age-related periodizations of human mental development; socio-psychological characteristics (properties, processes and states) of an individual; psychological characteristics of people of different age groups;

-Be able to use the formed universal and subject-specific competencies for self-development

-possess:

the skills to build developing learning situations that are favorable for personal development

Prerequisites

General Psychology

Postrequisites

Psychodiagnosics and correction of deviant Fundamentals of psychocorrection and counseling

Workshop on psychodiagnosics

Discipline cycle	Basic disciplines
Course	2
Credits count	5
Knowledge control form	Examination

Short description of discipline

During the study of this discipline, students get acquainted with the history of the formation of psychodiagnosics and its principles, psychodiagnostic methods and techniques. Students will learn how to evaluate the correctness of diagnostic techniques, conduct professional selection of psychodiagnostic tools, and form a register of techniques. At the end of the course, students will be able to organize and conduct a diagnostic examination, process, summarize and interpret the results. They will acquire the skills to draw up diagnostic conclusions and formulate recommendations.

Purpose of studying of the discipline

mastering the procedure for conducting a diagnostic examination of individuals and groups in accordance with the specifics of the subject of study

Learning Outcomes

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

Learning outcomes by discipline

- Conducting psychodiagnostic methods in compliance with the principles of "psychological safety", principles of interpretation of results

- search and study of scientific information of domestic and foreign experience to solve standard tasks of professional activity

- use existing methods; analyze the identified psychological phenomena of individuals and groups

Prerequisites

Developmental psychology

Postrequisites

Psychodiagnosics and correction of deviant Social gerontology

Psychodiagnosics of individual psychological characteristics

Discipline cycle	Basic disciplines
Course	2
Credits count	5

Short description of discipline

The discipline is aimed at studying the individual psychological characteristics of the subjects of interaction. The course covers the study of issues related to theories and methods of diagnostic research of individual personality traits. Methods for studying cognitive and personal characteristics of a person will be demonstrated. Upon completion of the course, the trainees will be able to identify individual psychological characteristics of the individual with the help of diagnostic tools and develop recommendations for correctional and developmental work.

Purpose of studying of the discipline

to give an idea of the place, role and significance of psychodiagnostics of individual psychological characteristics in the development of psychological science and in the practice of a psychologist, to form an understanding of the basic principles of modern psychodiagnostics and methodological approaches to solving psychodiagnostic problems.

Learning Outcomes

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

Learning outcomes by discipline

- use the acquired knowledge in the application of psychodiagnostic methods.
- to carry out developmental and corrective work on the basis of individual psychological characteristics.
- Demonstrate individual and group work skills.

Prerequisites

Developmental psychology

Postrequisites

Psychodiagnostics and correction of deviant Social gerontology

Psychodiagnostics of personality

Discipline cycle	Basic disciplines
Course	2
Credits count	5
Knowledge control form	Examination

Short description of discipline

The discipline expands and systematizes knowledge about the peculiarities of personal diagnostics, the possibilities and limitations of psychodiagnostic methods and techniques aimed at studying personality. The specifics, structure and models of the construction of the psychodiagnostic process of personality research are considered. Demonstrates the ability to assess the correctness of diagnostic techniques, forecasting changes and dynamics of the level of personal development; features of the interpretation of the results obtained and the construction of a psychodiagnostic conclusion about the personality.

Purpose of studying of the discipline

formation of students' professional competence in the field of personality psychodiagnostics.

Learning Outcomes

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

Learning outcomes by discipline

- the ability to select and apply psychodiagnostic tools that correspond to the goals, situation and type of clients, followed by mathematical and statistical data processing and interpretation with the writing of a psychological conclusion;
- the ability to diagnose the current level of development of cognitive, emotional-volitional and motivational spheres, mental states, temperament, character, abilities, personal traits, self-consciousness in normal and in mental disorders and to predict the dynamics of their development.

готовность readiness for diagnosis, examination and correction of psychological properties and conditions, mental processes, various types of human activity in normal and pathological conditions, taking into account the characteristics of age stages, development crises, risk factors, belonging to gender, ethnic, professional and other social groups .

Prerequisites

Developmental psychology

Postrequisites

Psychodiagnostics and correction of deviant Social gerontology

Gender Psychology

Discipline cycle	Profiling discipline
Course	2
Credits count	5
Knowledge control form	Examination

Short description of discipline

The course forms the understanding of the teaching characteristics of the human psyche and behavior related to gender, gender relations and gender differences. It provides for the consideration of knowledge and skills about the peculiarities of gender differences due to cultural and social factors. The skills of building activities in solving applied professional tasks taking into account gender characteristics and the skills of using diagnostic tools are demonstrated.

Purpose of studying of the discipline

give an idea of the nature of gender differences, the main problems of gender psychology, its categories and methods, as well as the main areas and ways of applying the acquired knowledge in practice

Learning Outcomes

ON 4 To draw up a conclusion on the specifics of human mental functioning, taking into account the peculiarities of age-related stages of development, to compare the main psychological theories in historical retrospect and in the future, revealing the nature of mental and personal structures.

ON 5 Navigate a wide range of psychological problems of transition from one age period to another, describe the forms, levels of mental development, formulate a request for psychological help on the peculiarities of mental and somatic development of the individual.

Learning outcomes by discipline

- understand the peculiarities of the psyche and behavior related to gender
- solves applied professional tasks taking into account gender characteristics
- applies diagnostic tools for measuring masculinity/femininity

Prerequisites

Psychological support of the educational process

Discipline cycle Basic disciplines

Course 3

Credits count 5

Knowledge control form Examination

Short description of discipline

This course is aimed at discussing the development of psychological support for participants in the educational process. During the course, students will acquire the skills of psychological and pedagogical support of the educational process. The subject systematizes knowledge and forms skills of psychological and pedagogical support through the assimilation of the main categories, analysis of theoretical aspects. Students will be able to develop individual educational, professional routes for both students and employees of educational organizations.

Purpose of studying of the discipline

creating favorable conditions for obtaining psychological knowledge and the formation of an adequate vision in the studios of psychological and pedagogical support in the educational process.

Learning Outcomes

ON 2 Establish psychological contact with the client and support him during the consultation process, recognize the criteria of norm and pathology of mental activity and their manifestations, help the client formulate a request for psychological assistance.

ON 3 To identify psychological aspects of activities in solving professional tasks of a psychologist.

ON 5 Navigate a wide range of psychological problems of transition from one age period to another, describe the forms, levels of mental development, formulate a request for psychological help on the peculiarities of mental and somatic development of the individual.

Learning outcomes by discipline

- Reproduces and explains the relevance of educational material from the study of the issue of psychological and pedagogical support of the educational process, first of all, the need of modern society for people

- The student solves typical problems based on the use of modern approaches to psychological support in education.

- The student integrates the development of soft skills of social interaction in certain periods of a person's life

Prerequisites

Developmental psychology General Psychology

Postrequisites

Manufacturing practice II

Preventive psychology

Discipline cycle Profiling discipline

Course 4

Credits count 6

Knowledge control form Examination

Short description of discipline

The course of preventive psychology is aimed at mastering the causes of deviant behavior, preventive measures and methods.

Preventive psychology studies ways and means of preventing social anomalies in adolescents and young people. The course reveals deviant behavior - the nature of behavior, adverse factors that determine social pathogenesis. Fundamentals of psychological and pedagogical research consider the method of preventive psychology, the historical aspects of the execution of criminal penalties in the form of imprisonment offenders.

Purpose of studying of the discipline

The aim of the course is the assimilation by students of the basic provisions of legal psychology, the acquisition of the necessary knowledge, skills and abilities in the field of the main branches of legal psychology, the formation of students' psychological knowledge, abilities and skills that allow them to effectively solve professional problems.

Learning Outcomes

ON 2 Establish psychological contact with the client and support him during the consultation process, recognize the criteria of norm and pathology of mental activity and their manifestations, help the client formulate a request for psychological assistance.

ON 3 To identify psychological aspects of activities in solving professional tasks of a psychologist.

Learning outcomes by discipline

- masters the causes of deviant behavior, measures and methods of prevention.

- develops ways and means of preventing social deviations in adolescents and young people

- have the skills to apply in practice the methods of diagnostics of development, communication, regulation of human behavior and activity at various age levels

Production Practice III

Art therapy

Discipline cycle Profiling discipline

Course 4

Credits count 5

Knowledge control form Examination

Short description of discipline

The course content defines the main directions, forms, and techniques of using art therapy techniques. Acquaintance and mastering of the theory and practice of art therapeutic effects in different age groups. Students study the features of the content of art therapy activities. As part of the course study, it is supposed to get acquainted with the features of fairy tale therapy, isotherapy, and game therapy. Students will master the skills of art therapy in different age and social communities .

Purpose of studying of the discipline

- creating a complete indicative basis for students for work;

- understanding the specifics of using art therapy techniques in the structure of a psychologist`s activities;

- the formation of skills in analyzing the psychological causes underlying human problems.

Learning Outcomes

ON8 Simulate teamwork and teamwork, communicate effectively with colleagues, management, victims and those in emergency zones; possess skills of effective use of working time.

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

Learning outcomes by discipline

1. Know the basic concepts, theoretical foundations of art therapy work

2. To master various methods and directions of art therapy to eliminate negative manifestations.

3. Evaluate the results of productive diagnostics in art therapy activities.

Prerequisites

Psychology history General Psychology

Postrequisites

Production Practice III

Gestalt therapy

Discipline cycle Profiling discipline

Course 4

Credits count 5

Knowledge control form Examination

Short description of discipline

The course assimilates the basic parameters of gestalt therapy, examines the basic concepts in the applied aspect, analyzes sessions with the client. The techniques of gestalt therapy in practice are considered. Priority attention is directed to the principles of gestalt therapy and the formation of skills of individual techniques and techniques of work individually and in groups. Students will be ready to demonstrate the ability to apply knowledge and skills in the field of gestalt therapy in practice.

Purpose of studying of the discipline

familiarizing students with the main theoretical aspects of Gestalt therapy in accordance with the modern idea of approaches to psychotherapy, as well as acquiring skills in using Gestalt therapy techniques in practical activities.

Learning Outcomes

ON8 Simulate teamwork and teamwork, communicate effectively with colleagues, management, victims and those in emergency zones; possess skills of effective use of working time.

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

Learning outcomes by discipline

1. Knows the terms of the basic concepts of Gestalt therapy.

2. Demonstrates knowledge about the main approaches and ideas of Gestalt therapy

3. Able to organize Gestalt therapy, while developing the patient's self-awareness.

Abilities: the student should be able to: operate with scientific and conceptual apparatus in matters of psychology cognitive sphere of personality;

Skills: to possess the skills of search and work with the relevant scientific literature; skills training and research activities; application of theoretical knowledge in the analysis of cognitive sphere of personality, as well as methods for the study of sensation, perception, imagination and thinking.

Dance and movement therapy

Discipline cycle	Profiling discipline
Course	4
Credits count	5
Knowledge control form	Examination

Short description of discipline

The course promotes students' mastery of the theory and methodology of dance and movement therapy. The basic principles and methodological techniques and techniques, group methods of dance and movement therapy are mastered. Basic skills and principles of work organization and effective handling of intense client reactions are formed. Students demonstrate their readiness to use various methods and technologies aimed at solving diagnostic and correctional-developmental tasks within the framework of dance-movement therapy.

Purpose of studying of the discipline

familiarization of students with the main problems of the psychology of creativity; the formation of a categorical apparatus necessary for mastering specific psychological knowledge.

Learning Outcomes

ON8 Simulate teamwork and teamwork, communicate effectively with colleagues, management, victims and those in emergency zones; possess skills of effective use of working time.

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

Learning outcomes by discipline

Has knowledge about the history of the development of Dance and movement therapy, about the goals and types of Dance and movement therapy.

2. Demonstrates knowledge about methods and techniques of motor plastic surgery.

3. Able to organize and conduct dance and movement therapy.

Prerequisites

Psychology history General Psychology

Postrequisites

Production Practice III

Mathematical Methods in Psychology

Discipline cycle	Profiling discipline
Course	4
Credits count	6
Knowledge control form	Examination

Short description of discipline

The discipline is aimed at mastering the work with methods of collecting, systematization and mathematical processing of research results, with mathematical statistics and mathematical methods of data analysis and their application in psychological research. Forms students' knowledge about the basic principles of mathematical statistics and methods of analysis and formal and meaningful interpretation of the data obtained during the study, increasing the level of applied statistical and psychological orientation.

Purpose of studying of the discipline

The main goal of the discipline is to develop students' skills to apply theoretical knowledge in practice; familiarizing students with mathematical statistics and mathematical methods of data analysis that are used in psychological research, the formation and development of such qualities of professional thinking as analysis, synthesis and generalization of psychological factors that characterize the psychological characteristics of a person; the formation of skills to draw correct conclusions and logically compare the data obtained using the methods; to promote the development of a culture of scientific research among students.

Learning Outcomes

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

Learning outcomes by discipline

- application of methods of collecting, systematization and mathematical processing of research results

- demonstrating knowledge of the principles of mathematical statistics

- interpretation of the data obtained during the study

Prerequisites

Developmental psychology Psychodiagnostics and correction of deviant General Psychology

Postrequisites

Production Practice III

Methodology and methods of scientific is-research

Discipline cycle	Profiling discipline
Course	4
Credits count	6
Knowledge control form	Examination

Short description of discipline

The course allows you to form an idea of scientific research, general methodological principles and peculiarities of modern science, basic operations, practical methods and techniques for conducting scientific research. It is aimed at mastering the skills of scientific search, analysis, experimentation, methods of collecting and processing scientific data. To discuss the problems of the principles and content of scientific research, the formation of skills and abilities in the field of methodology

Purpose of studying of the discipline

The purpose of studying the discipline is to master the basic tools of experimental research by the student; organization and planning of a psychological experiment in educational institutions.

Learning Outcomes

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

Learning outcomes by discipline

- reveal methodological principles
- application of practical methods and techniques of scientific research
- interpret scientific research data

Prerequisites

Developmental psychology Psychodiagnostics and correction of deviant General Psychology

Postrequisites

Production Practice III

Experimental psychology

Discipline cycle	Profiling discipline
Course	4
Credits count	6
Knowledge control form	Examination

Short description of discipline

The course examines the methodological foundations of psychological research, their classification, types and stages of the experiment. Helps students to master the schemes of experimental plans and identify internal/external validity, master the procedure for organizing and conducting research, develop skills for controlling experimental variables, interpreting and presenting research results. Students will be able to design, plan and conduct experimental research in psychology.

Purpose of studying of the discipline

Familiarization of future professionals with the methodology of psychological experiments.

Modern school, kindergarten, etc. formation of professional knowledge, skills and abilities to conduct psychological experiments in educational institutions.

Learning Outcomes

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

Learning outcomes by discipline

- apply the practical basics of organizing and planning a psychological experiment;
- evaluate the possibilities of various methods of general experimental psychology
- to be guided by modern trends in the development of experimental psychology.

Prerequisites

Developmental psychology Psychodiagnostics and correction of deviant General Psychology

Postrequisites

Production Practice III

Applied conflictology

Discipline cycle	Profiling discipline
Course	4
Credits count	5
Knowledge control form	Examination

Short description of discipline

The discipline allows you to get an idea of the directions and scientific schools of applied conflictology. The features and specifics of the theoretical and methodological analysis of the conflict and their applied significance are revealed. Models of behavior in conflict and ways of managing it will be considered. The course forms applied skills of conflict resolution in various situations, shows the importance of value and functional-target compromise and conflict management technology.

Purpose of studying of the discipline

familiarization with psychological theories and approaches to conflict phenomena; training in methods of prevention and resolution of socio-psychological conflicts.

Learning Outcomes

ON 3 To identify psychological aspects of activities in solving professional tasks of a psychologist.

ON8 Simulate teamwork and teamwork, communicate effectively with colleagues, management, victims and those in emergency zones; possess skills of effective use of working time.

Learning outcomes by discipline

- knowledge of the causes and types of conflicts, methods of their prevention and resolution;
- ability to analyze conflict situations in the organization and develop recommendations for their effective overcoming;
- mastering the skills of reflection, self-esteem, self

Prerequisites

Developmental psychology Psychodiagnostics and correction of deviant General Psychology

Psychological assistance in emergencies

Discipline cycle	Profiling discipline
Course	4
Credits count	5
Knowledge control form	Examination

Short description of discipline

The course "Psychological assistance in emergency situations" introduces students to the principles, methods, techniques of psychological assistance in an emergency situation. Promotes the development of skills to adequately determine the psychological states of people in an emergency situation to provide them with emergency assistance. Teaches techniques and techniques of emergency psychological assistance to people of different age groups experiencing tragic events. Methods of working with a crowd experiencing panic are considered.

Purpose of studying of the discipline

the formation of students` ability to show psychological stability in difficult and extreme conditions, apply methods of emotional and cognitive regulation to optimize their own activities and psychological state.

Learning Outcomes

ON 3 To identify psychological aspects of activities in solving professional tasks of a psychologist.

ON8 Simulate teamwork and teamwork, communicate effectively with colleagues, management, victims and those in emergency zones; possess skills of effective use of working time.

Learning outcomes by discipline

- Knowledge of methodological principles for the diagnosis of post-traumatic stress disorder;
- be able to orient yourself in various types of emergencies, in the forms of behavior of people in these situations;
- readiness to develop programs of diagnostic examination and psychocorrective (psychotherapeutic) work with the consequences of emergency situations.

Prerequisites

Developmental psychology Psychodiagnostics and correction of deviant General Psychology

Postrequisites

Production Practice III

Psychology of interpersonal relationships

Discipline cycle	Profiling discipline
Course	4
Credits count	5
Knowledge control form	Examination

Short description of discipline

The course introduces students to the basic concepts, theories and problems of psychology of communication and interpersonal interaction. The student will master the patterns, mechanisms of interpersonal relationships, features of the behavior of an individual and a group in conflict situations. Develops skills and abilities of building interpersonal interaction with different categories of people. Helps to master the skills of working with psychological techniques, promotes the development of communication skills and personal culture.

Purpose of studying of the discipline

to reveal the goals, functions and types of communication; to form knowledge, skills and interpersonal communication skills;

Learning Outcomes

ON 3 To identify psychological aspects of activities in solving professional tasks of a psychologist.

ON8 Simulate teamwork and teamwork, communicate effectively with colleagues, management, victims and those in emergency zones; possess skills of effective use of working time.

Learning outcomes by discipline

- knowledge of the main ways of psychological impact on an individual, group and community;
- ability to effectively convince and constructively interact in a team, taking into account the social, ethnic, confessional and cultural differences of individuals;
- use effective communication skills.

Prerequisites

Developmental psychology Psychodiagnostics and correction of deviant General Psychology

Postrequisites

Production Practice III

Pregraduation Practice

Discipline cycle	Profiling discipline
Course	4
Credits count	15
Knowledge control form	Total mark on practice

Short description of discipline

The pre-graduate practice provides for conducting the main experimental work on the topic of the thesis research. Students master the professional positions of a psychologist in the context of his main activities: diagnostics, correction, counseling. The mastered material is fixed, and serves as a subject for further comprehension, integration of the acquired knowledge, skills and abilities acquired in the educational process. Current and prospective planning of professional activity is carried out.

Purpose of studying of the discipline

Purpose of the practice:

- consolidation of theoretical knowledge obtained at the University;
- acquisition of professional skills;
- Formation of practical skills and abilities in the process of performing various tasks and tasks related to professional activity in the specialty "psychology";
- Preparation of a future specialist for work in accordance with the qualification "psychologist";

Learning Outcomes

ON9 Operate with technologies for planning and organizing psychological research; classify modern tools of psychodiagnostic techniques; organize a survey of persons with disabilities; evaluate the activities of a psychologist in special institutions, taking into account his training for work in various fields of practical psychology.

ON 12 Analyze and evaluate the psychological state of a person or group, distinguish between a range of cognitive processes, as well as all possible behavioral manifestations of personality, apply modern psychotechnics in the practice of a psychologist.

Learning outcomes by discipline

1. To master the professional positions of a psychologist in the context of his main activities: diagnostics, correction, counseling
2. To consolidate the mastered material and serves as a subject for further reflection, integration of the acquired knowledge, skills and abilities acquired in the educational process.
3. Instill a creative, research approach to the activities of a psychologist

Prerequisites

Basic and profile disciplines of the EP

Postrequisites

Final examination

Production Practice III

Discipline cycle	Profiling discipline
Course	4
Credits count	15
Knowledge control form	Total mark on practice

Short description of discipline

The industrial practice is aimed at mastering the teaching methodology of teaching psychological disciplines, obtaining the necessary knowledge and skills in managing the educational process in college, activating the cognitive activity of students. The trained psychologists develop pedagogical skills and skills, professional and value qualities; Students develop a steady interest in the profession of a psychologist, develop a need for continuous pedagogical self-education and development. To instill a creative, research approach to psychological and pedagogical activity.

Purpose of studying of the discipline

The purpose of production (pedagogical) practice is to maximize the approach of specialists to their professional skills in the conditions of theoretical and practical training, the formation of a stable interest in the chosen specialty. The content of production (pedagogical) practice is determined in accordance with the topic of research of the thesis.

Learning Outcomes

ON 3 To identify psychological aspects of activities in solving professional tasks of a psychologist.

ON 6 Understand the high social significance of the profession, responsibly and efficiently perform professional tasks, comply with the principles of professional ethics, organize joint conflict-free activities and interpersonal interaction of subjects of the psychological environment.

Learning outcomes by discipline

In the course of production practice, students have the opportunity to acquire practical skills and competencies in using the acquired theoretical knowledge, as well as to consolidate, expand and deepen them in their professional activities. Individual developmental and psychocorrectional work, individual and group counseling including the preparation, conduct and presentation of the results of the work.

Prerequisites

Basic and profile disciplines of the EP

Postrequisites

Final examination
