Principles of Marketing

Discipline cycle	Basic disciplines
Course	1
Credits count	5
Knowledge control form	Examination

Short description of discipline

The course will introduce students to the basic functions of marketing. Issues of ensuring the value of goods / services to meet the wishes of consumers are considered; target markets and the decision-making process for selecting the appropriate products to serve those markets. The subject of the course gives the main strategies for promoting, placing and pricing goods / services. Upon completion of the course, students will be able to apply the principles of marketing to product development and sales.

Purpose of studying of the discipline

Getting students a general idea of the basic principles of marketing

Learning Outcomes

ON 7 To have competence in the organization and management of business processes at its functional level.

ON 8 To have competencies in the field of assessing the market opportunities of a company and mastering market niches.

Learning outcomes by discipline

- participates in the development of the marketing strategy of organizations, plans and implements activities aimed at its implementation;
- analyzes the behavior of consumers of economic goods and the formation of demand;
- uses in the practical activities of organizations information obtained as a result of marketing research and a comparative analysis of effective management

Prerequisites

School course

Postrequisites

Principles of E-Business Brand Management Office Management Commodity research and examination of goods

Principles of business administration

Discipline cycle	Basic disciplines
Course	1
Credits count	5
Knowledge control form	Examination

Short description of discipline

The course provides students with knowledge and skills in the field of business management, which allows them to make effective management decisions in their professional activities. Business administrative services include business management in organizations, organizational relations in the business activity system, business organization, forms of power and leadership style, information base in business management, office work, personnel policy, conflicts in management, its management.

Purpose of studying of the discipline

Learning the basic concepts of planning, directing, organizing and controlling enterprises

Learning Outcomes

ON 7 To have competence in the organization and management of business processes at its functional level.

Learning outcomes by discipline

1. Knows the theoretical and methodological foundations of administrative and managerial activities.
2. Knows the methods and techniques of business administration; modern concepts and leadership styles in organizations; is able to carry out work on motivating the work activity of staff, planning and organizing managerial work.
3. Able to make effective administrative decisions in professional activities, develop and implement management strategies, adequately evaluate the results of the team's work.

Prerequisites

School course

Postrequisites

Global Strategic Management Advertising Industrial Management International Business Administration Legal regulation of commercial activities Fundamentals of public-private partnership

Statistics

Discipline cycle	Basic disciplines
Course	1
Credits count	5
Knowledge control form	Examination

Short description of discipline

The course will introduce students to the basic concepts and methods of probability theory and statistics. It provides an overview of the main probability distributions: the binomial distribution, the normal distribution, and the sampling distribution. This will help students become familiar with statistical methodologies for analyzing quantitative and qualitative data, such as interval estimation, hypothesis testing, regression analysis, categorical data analysis, and analysis of variance, which can be used to solve real-world statistical problems.

Purpose of studying of the discipline

Mastering the competencies necessary for training personnel who possess a modern methodology for collecting, processing, and summarizing statistical information

Learning Outcomes

ON 4 To possess skills of economic and financial analysis. Competencies developed to implement the financial accounting principles such as bookkeeping, final accounts, and ratio analysis in the business processes.

ON 7 To have competence in the organization and management of business processes at its functional level.

Learning outcomes by discipline

- application of statistical methods to identify patterns and dependencies in the studied phenomena;
- application of statistical methods to evaluate the effectiveness of implemented recommendations, decisions made, incl. managerial

Prerequisites

School course

Postrequisites

Business Software

Discipline cycle	Basic disciplines
Course	3
Credits count	5
Knowledge control form	Examination

Short description of discipline

This course introduces students to the latest business software and information systems widely used in business and professional environments. Particular attention in the study of the course is given to the tools used in the development of software in accordance with the current business and information needs of the company. State of the art software will be used throughout the course to practice the concepts learned.

Purpose of studying of the discipline

Studying of software or set of computer programs used by business users to perform various business functions.

Learning Outcomes

ON 6 To carry out business communications on the basis of modern technologies.

Learning outcomes by discipline

1. Knows the main types of business software, including office suites, enterprise management systems (ERP), project management programs and others; basic principles of development and implementation of business software; knowledge of methods for ensuring the security of data and information systems within business processes.
2. Can work with office applications, create documents, tables, presentations and analyze data using them; are able to develop and configure ERP systems, as well as manage projects using appropriate software; can analyze business software needs, select appropriate solutions and implement them.
3. Possesses the skills of collaboration and communication within the organization using business applications; has the skills to train other employees to use the software and support users; is able to ensure the security of data and information systems within business processes and solve software-related problems.

Prerequisites

Principles of E-Business

Postrequisites

Final examination

Macroeconomics

Discipline cycle	Basic disciplines
Course	3
Credits count	5
Knowledge control form	Examination

Short description of discipline

The course examines fundamental economic ideas and the functioning of the economy on a national scale. The interaction of aggregated quantities, such as the general price level and unemployment, is considered; investment and consumption; aggregate demand and aggregate supply, the macro level and their impact on economic growth. The monetary and credit policy is analyzed, including the state and banking systems, the impact of state spending on income and output.

Purpose of studying of the discipline

Formation of a system of knowledge on modern economic theory at the national economic level, which reflect the aggregate results of the country's economic activity and theoretical tools for market and state regulation of the national economy.

Learning Outcomes

ON 3 To have competencies in economic and financial trends.

ON 9 To be able to navigate the strategic values and growth factors of the company.

Learning outcomes by discipline

1. Know the laws of functioning of the modern economy at the macro level.
2. Be able to analyze economic processes occurring at the macro level depending on those influencing them factors.
