Introduction to the teaching profession

Discipline cycle	Basic disciplines
Course	1
Credits count	3
Knowledge control form	Examination

Short description of discipline

The training course is aimed at studying psychological and pedagogical activity, its essence and value characteristics. The course examines the study of a teacher's professional competence, his culture and the pedagogical foundations of various types of teacher's activities. Various sources of great pedagogical ideas are considered. Attention is paid to the study of a teacher's career, self-education management, the choice of goals for their development, methods and means, as well as an individual program of self-development of a future teacher.

Purpose of studying of the discipline

Acquaintance with the profession of a teacher-psychologist, the main tasks, goals, methodology and methods, principles of work of representatives of this profession in various spheres of human activity.

Learning Outcomes

- ON 3 To design the organization of the activity of a teacher-psychologist in the conditions of psychological service.*
ON 4 Analyze the psychological and pedagogical aspects of the profession in their professional activities.

Learning outcomes by discipline

- ON 3 To design the organization of the activity of a teacher-psychologist in the conditions of psychological service.*
ON 4 Analyze the psychological and pedagogical aspects of the profession in their professional activities.
-Owns a glossary of psychological and pedagogical concepts.
-Demonstrates knowledge about the professional competence of the teacher and his main activities.
- Able to make an individual self-development plan.

Prerequisites

School course

Postrequisites

General Psychology Pedagogy

Age psychology and physiology

Discipline cycle	Basic disciplines
Course	1
Credits count	5
Knowledge control form	Examination

Short description of discipline

The course allows you to form an idea of human anatomy and physiology, the specifics and features of age-related development, the patterns of higher nervous activity and functional features of the human nervous system are considered. Forms students` systematic understanding of mental and physiological development in ontogenesis, the main patterns of development and neoplasms of age, the most important mental features of the emerging personality of the child on the basis of taking into account psychophysiological norms.

Purpose of studying of the discipline

Formation of students` ideas about the diversity of approaches to the development of correct, scientific knowledge, mental and physiological development of a person in ontogenesis on the most important issues of psychology and physiological development in the aspect of cultural development. To equip students with theoretical and practical knowledge that contributes to strengthening their professional psychological, pedagogical and physiological training, in-depth study of the section of psychological and physiological knowledge.

Learning Outcomes

ON 2 Apply modern teaching technologies and criteria-based assessment, taking into account the individual, physiological and psychological characteristics of students.

Learning outcomes by discipline

1. the formation of an understanding of the mental and physiological development of a person about different views on the most important issues of physiological development with psychology in the aspect of cultural development.
2. strengthens the professional psychological, pedagogical and physiological training of students.
3. equipping with theoretical and practical knowledge, contributing to the improvement of psychophysiological knowledge.

Prerequisites

School course
